1. Remove the Roll-Out Tray and slides from the Docker as shown in figure 1.
2. Install upper channels on both sides of Docker with #89957 screws as shown in figure 1.
3. Loosely install the #88114 screws, #87858 lock washers and #87382 T-handles to the four Rack Mount Rails as shown in figure 2.
4. Install the Rack Mount Rails inside the Docker as shown in figure 3. Slide the screws behind the slots and move each rail to their appropriate location and tighten the T-handles.
