About this Guide

This document contains general and detailed information about the installation, trouble shooting and care of Eaton’s Single Swing End of Row Door product.

Intended Audience

This document is intended primarily for personnel responsible for installing and maintaining an Eaton Single Swing End of Row Door.

Technical Support

If you encounter any problems with this installation, send an email and detailed description of the problem as well as contact information to Technical Support at dc.support@eaton.com.

Sales Representative and Contact Information

Contact your Eaton Sales representative using one of the methods below:

Before you Begin

Before installing an Eaton Single Swing End of Row Door, it is recommended that you familiarize yourself with the various door components described within this document. Also, it would benefit installers to review the following section titled Installation Best Practices and Helpful Hints on page 3 of this installation guide.

Tools Required

The following tools are required to complete the installation of an Eaton Single Swing End of Row Door:

- A tape measure
- A chalk line (if allowed in your data center)
- A spirit level
- A powered screw gun/driver
- A 3/8” hex socket driver bit
- A Phillips head driver bit
## Installation Best Practices and Helpful Hints

This section contains an assortment of best practices and helpful hint topics that should be read before installing an Eaton Single Swing End of Row Door.

<table>
<thead>
<tr>
<th>More than a One Person Job</th>
<th>For reasons of safety and installation quality, it is highly recommended that two or more installers work together to complete the installation of an Eaton Single Swing End-of-Row Door.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>IMPORTANT!</strong></td>
<td>If there is additional hardware required to complete the installation of the Single Swing End of Row Door (floor, wall, and/or ceiling anchoring support), and the specified hardware is NOT itemized and included on the door quote, then the required hardware must be included and priced by the Installation Team on the installation quote.</td>
</tr>
<tr>
<td><strong>IMPORTANT!</strong></td>
<td>The hardware required for anchoring Single Swing End-of-Row Door components to a facility floor depend upon the floor material. Anchoring hardware required for each facility is site specific and MUST BE SPECIFIED AND/OR APPROVED by facility management; preferably during the planning, design, and system ordering phase.</td>
</tr>
<tr>
<td><strong>IMPORTANT!</strong></td>
<td>When identifying anchoring hardware, take into consideration the type and length of anchoring screws used on a data center floor. The floor material may be steel, concrete, aluminum, or wood-core. The proper screw type and size should be used based on the floor material.</td>
</tr>
<tr>
<td><strong>IMPORTANT!</strong></td>
<td>If prior to arrival, the installation team is not provided with details about the type of anchoring hardware required to conduct the installation, it is possible the team will arrive at the installation site without the necessary/proper anchoring hardware and the installation will be delayed until the proper anchoring hardware is either provided or acquired.</td>
</tr>
<tr>
<td><strong>Installation Accuracy</strong></td>
<td>The Single Swing End of Row Door is a mechanical device that is shipped partially disassembled. As such the quality of door operation and reliability will depend on the accuracy of installation. Specifically, the smooth operating characteristics of the door rely on accurate measuring, leveling, squareness and alignment of the field installed components.</td>
</tr>
</tbody>
</table>
### Single Swing End of Row Door Components - Detailed Descriptions

#### Single Swing End of Row Door Components

This section contains brief descriptions of the components used to construct an Eaton Single Swing End of Row Door. Detailed installation instructions start on page 7.

<tbody>
<tr>
<td>The Enclosure Brackets provide adjustable attachment flanges that enable the Jamb Walls to be attached to the tops of the data center’s electronic rack enclosures.</td>
<td></td>
</tr>
</tbody>
</table>
### Vertical Door Stops
The Vertical Door Stops provide surfaces against which the door seats when closed. The Vertical Door Stops have pre-installed pile gaskets that seal against the door’s rear surface.

![Vertical Door Stops Image]

### Transom
The Transom is the horizontal structure that defines the top of the door opening.

![Transom Image]

### Transom Cover
The Transom Cover finishes off the inside of the Transom and provides a sealing surface for other aisle containment products. The Transom Cover also has a pre-installed pile gasket that seals against the door’s rear surface.

![Transom Cover Image]

### Door Components
- **Door Panel** - (Field configured for either left hinge or right hinge applications).
- **Door Handle**
- **Door Latch (Male and Female)**

Installing an Eaton Single Swing End of Row Door

The Eaton Single Swing End of Row Door components can be configured to provide a left hinged or a right hinged door.

For the purposes of this Installation Guide, a left hinged door is defined as a door that has hinges on the left side of the door and a handle on the right side of the door, when viewed from outside of the aisle. A left hinged door is shown on the cover of this Installation Guide.

The following instructions are for a left hinged door (as shown on the front page of this Installation Guide). For a right hinged door your assembly steps should mirror the images shown.

Step 1: Prepare the Site

1. Measure out 2” from each electronic rack and place marks on the floor.
2. Snap a chalk line on these two marks. This line represents the outer face of the Jamb Wall. (Note: if usage of a chalk line is not permitted in your data center, use another acceptable means to define this line.)
3. Single Swing End of Row Doors are available in two door opening widths: 33” and 36”

Mark two points on the line either 33” or 36” apart to designate the desired position of your door opening width.

Step 2: Pre-assemble the Jamb Walls

Pre-assemble the Vertical Door Stops

Assemble one #10-32 x 3/8” Phillips Pancake Head Machine Screw and one #10-32 “T”-Nut into each oval slot on the two Vertical Door Stops. Leave the screws loose, with about 1/8” clearance.
**Pre-assemble the Left Hand Jamb Wall**

1. Attach (2) Hinges to the right side of the Jamb Wall (as viewed from outside of the aisle) using (3) #10 x ½" Phillips Flat Head Self Threading Screws and (1) Backing Plate for each Hinge. The Hinges MUST be oriented with their removable pins pointing upwards.

2. If it is necessary to seal the Jamb Walls to the electronic rack enclosures, apply one half of the provided ‘D-bulb” gasket to the left rear edge of the Jamb Wall (as viewed from outside of the aisle).

3. Attach one of the pre-assembled Vertical Door Stops to the right rear edge of the Jamb Wall (as viewed from outside of the aisle). Center the Vertical Door Stop in its oval mounting slots, and then tighten in place.

4. Attach (1) Floor Anchor Bracket to the face of the Jamb Wall with (2) 1/4-20 x ½” Hex Head Self Threading Screws. Secure the bracket in its highest position.

5. Pre-install (2) 1/4-20 x ½” Hex Head Self Threading Screws into the top two Transom attachment holes on the right side of the Wall. Leave the screws protruding about 1/8".
Step 3: Erect and Secure the Jamb Wall Assembly *(This is a two person job.)*

1. Ensure that the walls’ leveling feet are fully retracted. Stand the left hand Jamb Wall, aligned with the chalk line and the mark that defines the door opening width.

2. Loosely attach the left hand Jamb Wall to the top of the electronic rack enclosure with an Enclosure Bracket. Attach the bracket to the wall in the most optimum position with (4) 1/4-20 x ½” Hex Head Self Threading Screws. Attach the bracket to the enclosure with appropriate fasteners. (*See note below.*)

3. Roughly position the right hand Jamb Wall, and then engage the Transom Assembly onto the pre-installed Transom attachment screws on each Wall. Now tighten the (4) Transom attachment screws.

4. Loosely attach the right hand Jamb Wall to the adjacent electronic rack enclosure in the same manner as the left hand Jamb Wall.

*Note: If direct attachment to the electronic rack enclosure is not permitted, a Ceiling Hanger Attachment Bracket (part number SCCI) is available. See page 13 for installation instructions.*
5. Install a Tie Bar onto the top of the Jamb Wall Assembly at each Transom/Wall interface with (4) 1/4-20 x 1/2" Hex Head Self Threading Screws.

Level and Secure the Jamb Wall Assembly

1. **FOR PROPER ALIGNMENT AND FUNCTION OF THE SINGLE SWING DOOR, THE JAMB WALL MUST BE LEVEL, SQUARE AND PLANAR.**

   Verify that the Jamb Wall Assembly is level, planar, and aligned with the marks on the floor. Extend the Walls’ leveling feet as required, but not more 1/2”.

   Then tighten the Enclosure Bracket screws.

2. Lower the Floor Anchor Brackets to the floor (if required) and then attach the brackets to the floor with appropriate fasteners for the site.

   **THE BOTTOM OF THE DOOR OPENING MUST MEASURE EITHER 33” OR 36” ±1/16. (DEpending on your model).**
Step 4: Install the Transom Cover

**Install the Transom Cover**

Attach the Transom Cover to the Transom with (8) #10 x 3/8" Phillips Pan Head Self Threading Screws.

The pile gasket should be facing the door opening.

---

Step 5: Install the Door *(This is a two person job.)*

**Prepare the Door**

1. Remove and discard (2) Small Hole Plugs from the right side of the door (as viewed from outside of the aisle).
2. Attach the Handle to the door with (2) #10-32 x 1-1/4" Phillips Head Machine Screws and (2) #10-32 Hex Keps Nuts.
3. Insert the Screw Cover into the Handle.
4. Insert (2) Large Hole Plugs into the screw access holes.
5. Snap the female portion of the door latch into the door as shown. The arrow on the latch should be pointing up.
Install the Door

The screws that attach the door to the hinges differ from the screws that are used to attach the hinges to the Jamb Wall. The door screws are pre-installed into the door at the factory to ensure that they do not get intermixed with the wall screws.

1. Remove the (6) hinge screws from the door.
2. While one person positions the door against the hinges, the other person can attach the door to the hinges, using the (6) hinge screws.

Align the Door

1. FOR PROPER ALIGNMENT AND FUNCTION OF THE SINGLE SWING DOOR, THE JAMB WALL ASSEMBLY MUST BE LEVEL, SQUARE AND PLANAR.

2. Fully close the door and examine the alignment of the door with the Jamb Wall assembly.

   When properly adjusted:
   a. The face surface of the door should align with the face of the Transom and with the face of each Jamb Wall, and
   b. There should be a .20” (7/32”) parallel gap between the top of the door and the Transom, and
   c. There should be a .30” (5/16”) parallel gap between the handle side of the door and the adjacent Jamb Wall.

3. If the door does not simultaneously align with the face of the Transom and the Jamb Walls, the Jamb Wall assembly is not planar. Adjust the top (or bottom) of one of the Jamb Walls either in or out, as required, to bring the door into plane.

4. If the gaps between the door and the Transom and Jamb Walls are not parallel, the door opening is not square. Elevate (or lower) one of the Jambs Walls leveling feet to bring the top gap into parallel alignment.
Install the Door Latch (Male Portion)

1. Attach the male portion of the door latch to the right hand Vertical Door Stop with (2) #8 x ¼” Phillips Pan Head Self Threading Screws.

   DO NOT OVER-TIGHTEN THE SCREWS!

2. Fully close the door to verify that the male portion of the latch aligns with the female portion in the door. When properly aligned, there should be very little resistance to engagement.

   There is a small amount of vertical adjustment available in the male portion of the latch. If additional adjustment is required, loosen the screws that secure the right hand Vertical Door Stop to the Jamb Wall.

   Adjust the Vertical Door Stop as required, up, down, left or right, and then retighten the screws.

Step 6: Adjust the Door’s Bottom Seal

When properly adjusted, the door’s Bottom Seal should not hinder the free swing of the door through its entire travel.

Loosen the three screws that retain the Bottom Seal Plate into position. Slide the Bottom Seal Plate up or down as required, so that the edge of the Wiper Gasket maintains a minimum 1/16” gap to the floor through the entire swing of the door.

Then tighten the screws to retain the adjustment.
Accessory Walls

Accessory Walls are available in 6", 9", 12" & 24" widths. Accessory Walls can be joined to the existing Jamb Walls to make a wider Jamb Wall Assembly.

Join the Accessory Wall to the existing Jamb Wall using (1) Tie Bar, (1) Floor Anchor Bracket and (6) 1/4-20 x ½" Hex Head Self Threading Screws.

Ceiling Hanger Attachment Bracket (part #SCCI)

If direct attachment to the electronic rack enclosures is not permitted, a Ceiling Hanger Attachment Bracket (part number SCCI) is available.

The Stud Plate that is included with the SCCI Bracket Kit is not required for this application. Attach the bracket directly to the back of the Jamb Wall with (2) 1/4-20 x ½" Hex Head Self Threading Screws.

Attach your threaded rod to the “U” slots in the bracket with appropriate washers and nuts.

Additional lateral support is recommended, as shown, to prevent swaying of the Jamb Wall Assembly.
Single Swing End of Row Door Maintenance

This section describes how to care for your Eaton Single Swing End of Row Door by performing regular maintenance. Regular maintenance will ensure trouble free operation of your door and efficient aisle containment.

Routine Inspection and Cleaning as Needed

Conduct routine inspections on your door and perform necessary cleaning tasks as needed. Refer to the following table for routine tasks.

Inspect the free travel of the Single Swing door. The door should swing freely and easily latch closed, aligned with the Transom and the adjacent Jamb Walls. If not, adjust the Door Latch position, and the position of the Bottom Seal (see page 12).
