Chapter 1  Introduction

The Eaton® 93PM Integrated Accessory Cabinet-Bypass and Distribution (IAC-BD) is designed for use with the Eaton 93PM 400 kW Series Uninterruptible Power Supplies (UPSs). The IAC-BD provides maintenance bypass functions with configurable features, enabling adaptation and expansion without costly electrical rework and power distribution options for servers, racks, other equipment, and larger loads via distribution subfeed circuit breakers. The distribution options are custom configurable, enabling adaptation and expansion without costly electrical rework. One 480V model is available, the 93PM 400 kW IAC-BD.

The IAC-BD is housed in a single free-standing cabinet with safety shields behind the front door for hazardous voltage protection. The cabinets match the UPS cabinet in style and color.

Figure 1 shows the Eaton 93PM 400 kW IAC-BD.

NOTE  Startup and operational checks must be performed by an authorized Eaton Customer Service Engineer, or the warranty terms specified in Chapter 9 Warranty become void. This service is offered as part of the sales contract for the UPS. Contact an Eaton service representative in advance (usually a two-week notice is required) to reserve a preferred startup date.

Figure 1. Eaton 93PM 400 kW IAC-BD
1.1 Features

The following descriptions provide a brief overview of the IAC-BD functions:

- **Maintenance Bypass Functions**
  - Two breaker bypass configuration: The bypass contains a Maintenance Bypass (MBP) and Maintenance Isolation (MIS) breaker. This allows Maintenance bypass for system repair or maintenance. The critical load is NOT protected in the Maintenance bypass mode.
  - Optional three breaker bypass configuration: Maintenance Bypass (MBP) and Maintenance Isolation (MIS) breakers, and a Bypass Input Breaker (BIB) enable power to completely bypass the UPS. The UPS can then be safely serviced or replaced without interrupting power to critical systems.
  - Mechanical bypass interlock standard.
  - Optional Trapped Key interlock with Solenoid Key Release Unit (SKRU).

- **Distribution Functions**
  - Two to four 100% rated 100-250A adjustable output distribution breakers are available to distribute the output power from the UPS to Power Distribution Units or larger high current critical loads. The breakers have adjustable trip rating and are enclosed behind the hinged doors and trim panels on the front of the IAC-BD.
  - Optional factory kit to allow subfeed breakers to be field installed.
  - Optional Eaton INCOM PM3 module to implement a Branch Circuit Monitoring System (BCMS) using the INCOM communications protocol (refer to Eaton Instruction Leaflet IL01219085E).

1.2 Installation Features

- The IAC-BD is designed to be installed in line-up-and-match or standalone configurations:
  - In line-up-and-match configurations input power wiring is routed through the side panels between the UPS and the IAC-BD.
  - In standalone configurations input power wiring is routed using external conduit through top or bottom entry conduit plates.
  - Output wiring is routed using external conduit through top or bottom entry conduit plates.
- To reduce installation time, connections to the bypass input and MIS, are made to easily accessible mechanical lug terminals located at the bottom front of the cabinet. Subfeed breaker output connections are made to mechanical lug terminals on the breakers at the front of the cabinet
- Top or rear ventilation is available
- The cabinet can be leveled and secured in place using leveling feet

A line-up-and-match IAC-BD is installed adjacent to the UPS. The IAC-BD may be installed on the right side or the left side of the UPS cabinet as viewed from the front of the cabinets. See Figure 2 and Figure 3 for line-up-and-match configuration views.
Figure 2. Eaton 93PM 400 kW UPS with Left Positioned Eaton 93PM 400 kW IAC-BD

Figure 3. Eaton 93PM 400 kW UPS with Right Positioned Eaton 93PM 400 kW IAC-BD
1.3 Model Configurations

The following 93PM IAC-BD model configurations are available for use with the 93PM 400 kW UPS Series:

- Two breaker configurations containing a MBP with auxiliary contacts and MIS
  - Optional two to four JG-Frame 3-pole 100-250A adjustable subfeed distribution breakers.
  - Optional Trapped Key interlock with SKRU.
- Three breaker configurations containing a MBP with auxiliary contacts, a MIS, and a BIB
  - Optional two to four JG-Frame 3-pole 100-250A adjustable subfeed distribution breakers.
  - Optional Trapped Key interlock with SKRU.

1.4 Using This Manual

This manual describes how to install the IAC-BD. Read and understand the procedures described to ensure trouble-free installation and operation.

Read through each procedure before beginning the procedure. Perform only those procedures that apply to the UPS system being installed or operated.

1.5 Conventions Used in This Manual

This manual uses these type conventions:

- **Bold type** highlights important concepts in discussions, key terms in procedures, and menu options, or represents a command or option that you type or enter at a prompt.
- **Italic type** highlights new terms where they are defined.
- **Screen type** represents information that appears on the screen or LCD.

<table>
<thead>
<tr>

<tbody>
<tr>
<td>NOTE</td>
<td>Information notes provide pertinent information about important features or instructions.</td>
</tr>
<tr>
<td>[Keys]</td>
<td>Brackets are used when referring to a specific key, such as [Enter] or [Ctrl].</td>
</tr>
</tbody>
</table>

In this manual, the term **UPS** refers only to the UPS cabinet and its internal elements. The term **UPS system** refers to the entire power protection system – the UPS cabinet, an external battery system, and options or accessories installed.

The term **line-up-and-match** refers to accessory cabinets that are physically located adjacent to the UPS. The term **standalone** refers to accessory cabinets that are located separate from the UPS.
1.6 Symbols, Controls, and Indicators

The following are examples of symbols used on the UPS or accessories to alert you to important information:

**RISK OF ELECTRIC SHOCK** - Observe the warning associated with the risk of electric shock symbol.

**CAUTION: REFER TO OPERATOR’S MANUAL** - Refer to your operator’s manual for additional information, such as important operating and maintenance instructions.

This symbol indicates that you should not discard the UPS or the UPS batteries in the trash. This product contains sealed, lead-acid batteries and must be disposed of properly. For more information, contact your local recycling/reuse or hazardous waste center.

This symbol indicates that you should not discard waste electrical or electronic equipment (WEEE) in the trash. For proper disposal, contact your local recycling/reuse or hazardous waste center.

1.7 For More Information

Refer to the *Eaton 93PM UPS (100–400 kW, 480V — 400 kW Frame) Installation and Operation Manual* for the following additional information:

- UPS, optional components, and accessory installation instructions, including site preparation, planning for installation, wiring and safety information, and detailed illustrations of cabinets and optional accessories with dimensional and connection point drawings
- UPS operation, including UPS controls, functions of the UPS, standard features and optional accessories, procedures for starting and stopping the UPS, and information about maintenance and responding to system events
- Communication capabilities of the UPS system

Visit [www.eaton.com/powerquality](http://www.eaton.com/powerquality) or contact an Eaton service representative for information on how to obtain copies of these manuals.
1.8 Getting Help

If help is needed with any of the following:

- Scheduling initial startup
- Regional locations and telephone numbers
- A question about any of the information in this manual
- A question this manual does not answer

Please call the Customer Reliability Center at:

United States: 1-800-843-9433
Canada: 1-800-461-9166 ext 260
All other countries: Call your local service representative

Please use the following e-mail address for manual comments, suggestions, or to report an error in this manual:

E-ESSDocumentation@eaton.com

1.9 Equipment Registration

Please visit www.eaton.com/pg/register to register your new Eaton UPS / Eaton UPS Accessory.

Model Number: 

Serial Number: 
Chapter 2 Safety Warnings

IMPORTANT SAFETY INSTRUCTIONS SAVE THESE INSTRUCTIONS

This manual contains important instructions that should be followed during installation and maintenance of the UPS system and batteries. Read all instructions before operating the equipment and save this manual for future reference.

The UPS system is designed for industrial or computer room applications, and contains safety shields behind the door and front panels. However, the UPS system is a sophisticated power system and should be handled with appropriate care.

DANGER

This UPS system contains LETHAL VOLTAGES. All repairs and service should be performed by AUTHORIZED SERVICE PERSONNEL ONLY. There are NO USER SERVICEABLE PARTS inside the UPS.

WARNING

• The UPS system is powered by its own energy source (batteries). The output terminals may carry live voltage even when the UPS is disconnected from an AC source.

• To reduce the risk of fire or electric shock, install this UPS system in a temperature and humidity controlled, indoor environment, free of conductive contaminants. Ambient temperature must not exceed 40°C (104°F). Do not operate near water or excessive humidity (95% maximum). The system is not intended for outdoor use.

• As a result of the connected loads, high leakage current is possible. Connection to earth ground is required for safety and proper product operation. Do not check UPS system operation by any action that includes removal of the earth (ground) connection with loads attached.

• Ensure all power is disconnected before performing installation or service.

• ELECTRIC ENERGY HAZARD. Do not attempt to alter any UPS system or battery wiring or connectors. Attempting to alter wiring can cause injury.

CAUTION

• Installation or servicing should be performed by qualified service personnel knowledgeable of UPS and battery systems, and required precautions. Keep unauthorized personnel away from equipment. Consider all warnings, cautions, and notes before installing or servicing equipment.

• Keep the Accessory cabinet doors closed and front panels installed to ensure proper cooling airflow and to protect personnel from dangerous voltages inside the unit.

• Do not install or operate the UPS system close to gas or electric heat sources.

• The operating environment should be maintained within the parameters stated in this manual.

• Keep surroundings uncluttered, clean, and free from excess moisture.

• Observe all DANGER, WARNING, and CAUTION notices affixed to the inside and outside of the equipment.
Chapter 3 Installation Plan and Unpacking

Use the following basic sequence of steps to install the Eaton 93PM Integrated Accessory Cabinet-Bypass and Distribution (IAC-BD):

1. Create an installation plan for the IAC-BD.
2. Prepare your site for the IAC-BD.
3. Inspect and unpack the IAC-BD.
4. Unload and install the IAC-BD.
5. Complete the Installation Checklist.
6. Have authorized service personnel perform preliminary operational checks and start up the UPS system.

**NOTE**

Startup and operational checks must be performed by an authorized Eaton Customer Service Engineer, or the warranty terms specified in Chapter 9 Warranty become void. This service is offered as part of the sales contract for the UPS. Contact an Eaton service representative in advance (usually a two-week notice is required) to reserve a preferred startup date.

3.1 Creating an Installation Plan

Before installing the IAC-BD, read and understand how this manual applies to the system being installed. Use the procedures and illustrations in this section to create a logical plan for installing the IAC-BD. This section contains the following information:

- Physical features and requirements, including dimensions
- Power wiring installation information

3.2 Preparing the Site

For the UPS system to operate at peak efficiency, the installation site should meet the environmental parameters outlined in this manual. The operating environment must meet the weight, clearance, and environmental requirements specified for the applicable accessory cabinet.

3.2.1 Environmental and Installation Considerations

The UPS system installation, including the IAC-BD, must meet the following guidelines:

- The system must be installed on a level floor suitable for computer or electronic equipment.
- The system must be operated at an altitude no higher than 1500m (5000 ft) without derating. For additional assistance with high altitude operation, contact an Eaton service representative (see paragraph 1.8 Getting Help).
- The system must be installed in a temperature and humidity controlled indoor area free of conductive contaminants.

Failure to follow guidelines may void your warranty.

The basic environmental requirements for operation of the IAC-BD are:

- Recommended Operating Range: 5–40°C (41–104°F)
- Maximum Relative Humidity: 5–95%, noncondensing

The IAC-BD operating environment must accommodate the weight requirements shown in Table 1 and the size and space requirements shown in Figure 4 through Figure 6.
Table 1. IAC-BD Cabinet Weights

<table>
<thead>
<tr>
<th>Model</th>
<th>Weight kg (lb)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Eaton 93PM 400 kW IAC-BD with MBP, MIS, BIB, and four Subfeed Breakers</td>
<td>373 (822) 321 (708) 4 at 80 (177)</td>
</tr>
</tbody>
</table>

The IAC-BD uses convection cooling to regulate internal component temperature. Air inlets are in the front of the cabinet and outlets are on top of the cabinet for top exhaust (see Figure 7) or in the back of the cabinet for rear exhaust (see Figure 8). Allow clearance in front of and on top or in back of the cabinet depending on type of exhaust for proper air circulation. The clearances required around the IAC-BD are shown in Table 2.

Table 2. IAC-BD Cabinet Clearances

| From Front of Cabinet                  | 914.4 mm (36”) working space |
| From Top of Cabinet with Top Exhaust   | 203 mm (8”) minimum clearance for ventilation |

### 3.2.2 IAC-BD Power Wiring Preparation

Read and understand the following information while planning and performing the installation:

---

**WARNING**

As a result of the connected loads, high leakage current is possible. Connection to earth ground is required for safety and proper product operation. Do not check IAC-BD operation by any action that includes removal of the earth (ground) connection with loads attached.

---

- Refer to national and local electrical codes for acceptable external wiring practices.
- For external maintenance bypass input, MIS, and BIB wiring, use copper wire with 75°C rated insulation. For external subfeed output wiring, use copper wire with 90°C rated insulation. Wire sizes listed in Table 3 through Table 4 are for copper wiring only. If wire is run in an ambient temperature greater than 40°C (104°F), higher temperature wire and/or larger size wire may be necessary. Wire sizes are based on using the specified breakers.
- Recommended wire sizes are based on NFPA National Electrical Code® (NEC®) 70 Table 310.15(B)(16) 75°C ampacity with 40°C ambient correction factors.
- Refer to NEC Article 250 and local codes for proper grounding practices.
- Per NEC Article 300-20(B), all three-phase conductors must be run in the same conduit. Ground must be run in the same conduit as the phase conductors.
- A neutral conductor is not used from the source or supplied to the load.
- Conduit is to be sized to accommodate three phase conductors and one ground conductor.
- Phase rotation must be clockwise starting with phase A (rotation A,B,C).
- Material and labor for external wiring recommendations are to be provided by the customer.
- When installing an external maintenance bypass, all feeds to the UPS must have a service disconnect independent of the maintenance bypass power path. Most maintenance bypass solutions provide UPS input feeds derived from but isolated from the maintenance bypass power path. The source disconnect devices for maintenance bypass and the UPS input must be isolated but derived from the same voltage source. If the maintenance bypass solution being installed does not provide such functionality, DO NOT use a single feeder breaker to supply both the UPS and the maintenance bypass.
- Refer to the appropriate Eaton 93PM UPS installation and operation manual listed in paragraph 1.7 For More Information for UPS cabinet conduit and terminal specifications and locations.
- The term line-up-and-match refers to accessory cabinets that are physically located adjacent to the UPS. The term standalone refers to accessory cabinets that are located separate from the UPS.

For external power wiring recommendations, including the minimum AWG size of external wiring, see Table 3 or Table 4. Wire sizes listed are for copper wiring only.

3.2.3 IAC-BD Interface Wiring Preparation

Control wiring for features and options should be connected at the customer interface terminal block located inside the IAC-BD.

**WARNING**

Do not directly connect relay contacts to the mains related circuits. Reinforced insulation to the mains is required.

Read and understand the following notes while planning and performing the installation:

- Use Class 1 wiring methods (as defined by the NEC) for interface wiring from 30V to 600V. The wire should be rated for 600V, 1A minimum. 12 AWG maximum wire size.
- Use Class 2 wiring methods (as defined by the NEC) for interface wiring up to 30V. The wire should be rated for 24V, 1A minimum.
- Use twisted-pair wires for each input and return or common.
- All interface wiring and conduit is to be supplied by the customer.
- Interface wiring can be installed using the inter-cabinet wiring access pass-through or by routing wiring through conduit between cabinets.
- Install the interface wiring in separate conduit from the power wiring.
3.3 Inspecting and Unpacking the IAC-BD

The cabinet is shipped bolted to a wooden pallet and covered with outer protective packaging material (see Figure 9).

**NOTE**
Startup and operational checks must be performed by an authorized Eaton Customer Service Engineer, or the warranty terms specified in Chapter 9 Warranty become void. This service is offered as part of the sales contract for the UPS. Contact an Eaton service representative in advance (usually a two-week notice is required) to reserve a preferred startup date.

**WARNING**

The IAC-BD is heavy (see Table 1). If unpacking and unloading instructions are not closely followed, the cabinet may tip and cause serious injury or death.

1. Carefully inspect the outer packaging for evidence of damage during transit.

**CAUTION**

Do not install a damaged cabinet. Report any damage to the carrier and contact an Eaton service representative immediately.

**NOTE**
For the following step, verify that the forklift or pallet jack is rated to handle the weight of the cabinet (see Table 1).

2. Use a forklift or pallet jack to move the packaged cabinet to the installation site, or as close as possible, before unpacking. If possible, move the cabinet using the pallet. Insert the forklift or pallet jack forks between the supports on the bottom of the pallet (see Figure 6 for the IAC-BD cabinet center of gravity measurements).

**CAUTION**

Do not tilt the IAC-BD more than 10° from vertical or the cabinet may tip over.

3. Set the pallet on a firm, level surface, allowing a minimum clearance of 3m (10 ft) on each side for removing the cabinet from the pallet.

4. Remove the protective packaging material from the cabinet and recycle in a responsible manner. Retain the parts kit box packed inside the cabinet.

5. Inspect the contents for any evidence of physical damage, and compare each item with the Bill of Lading. If damage has occurred or shortages are evident, contact an Eaton service representative immediately to determine the extent of the damage and its impact on further installation.

**NOTE**
While waiting for installation, protect the unpacked cabinet from moisture, dust, and other harmful contaminants. Failure to store and protect the IAC-BD properly may void your warranty.
Figure 9. Eaton 93PM IAC-BD as Shipped on Metal and Wood Pallet
Installation Plan and Unpacking
Chapter 4  Installation

This chapter contains installation instructions, including unloading, power wiring, and interface wiring, for the Eaton 93PM Integrated Accessory Cabinet-Bypass and Distribution (IAC-BD).

4.1 Preliminary Installation Information

**WARNING**

Installation should be performed only by qualified personnel.

Refer to the following while installing the IAC-BD:

- See **Chapter 3 Installation Plan and Unpacking** for cabinet dimensions, equipment weight, wiring and terminal data, and installation notes.
- Do not tilt the cabinets more than ±10° during installation.

4.2 Unloading the IAC-BD Cabinet from the Pallet

**WARNING**

- The IAC-BD is heavy (see **Table 1** for cabinet weight).
- RISK OF INSTABILITY. Do not remove any internal panels until the cabinet is removed from and lowered from the pallet.
- Do not tilt cabinet more than 10° from vertical.
- Lift the cabinets only with a forklift or pallet jack or damage may occur.
- Ensure forklift is rated to handle the weight of the cabinet.

Failure to follow these instructions may result in severe injury or death.

**NOTE**

For the following procedures, verify that the forklift or pallet jack is rated to handle the weight of the cabinet (see **Table 1** for cabinet weight).

The IAC-BD is bolted to a pallet consisting of two metal angle supports and two flat supports secured to two wood supports.

To remove the pallet:

**CAUTION**

Do not use the jacking bolts on a soft surface floor. Use only on a hard surface, such as concrete. If necessary remove pallet on a hard surface and roll cabinet to final installation position.

1. If not already accomplished, use a forklift or pallet jack to move the IAC-BD to the installation area, or as close as possible, before unloading from the pallet. Insert the forklift or pallet jack forks between the supports on the bottom of the pallet (see **Figure 6** for the IAC-BD cabinet center of gravity measurements).
2. Open the front door by lifting the latch from the bottom and turning to the right (counterclockwise) and swing the door open.
3. Locate the four 1/2" jacking bolts from the parts bag packed inside the front door and install them in the threaded holes in the front and rear supports as shown in **Figure 10**. Place a floor protector from the parts kit underneath each jacking bolt, and screw the bolts down against them.
The floor protectors protect the floor from being marred by the jacking bolts.

Figure 10. Removing the Pallet Skids and Supports

4. Loosen, but do not remove, the skid mounting bolts holding the left, right, front, rear, and two center supports to the pallet skids (see Figure 10). DO NOT loosen or remove the cabinet mounting bolts or the cabinet support bolts.

**WARNING**

RISK OF INSTABILITY. Turning the jacking bolts unevenly may cause the cabinet to become unbalanced. To prevent tipping the cabinet, raise the cabinet no more than 3 mm (1/8") above the floor (just enough to allow the removal of the pallet skids). Failure to follow these instructions can result in serious injury or death.

5. Turn each jacking bolt consecutively, two full turns, until the pallet skids clear the floor by approximately 3 mm (1/8").

**NOTE**

In the following step the center supports will drop away from the cabinet and the pallet skids when the skids are removed.

6. Remove the hardware loosened in Step 4. Pull the two pallet skids out from under the left, right, front, rear, and two center supports. Recycle the pallet skids, supports, and hardware in a responsible manner.

7. Carefully and evenly **lower the cabinet by turning each jacking bolt consecutively two full turns (maximum)** until the casters contact the floor and the cabinet is no longer supported by the jacking bolts.
8. After the IAC-BD is resting on the floor, remove the jacking bolts and floor protectors. Recycle them in a responsible manner.

9. Remove the cabinet support bolts fastening the left, right, front, and rear supports together (see Figure 10).

10. Remove the cabinet mounting bolts holding the left, right, front, and rear supports to the cabinet base and remove the supports.

11. If installing the cabinet permanently, retain the cabinet mounting bolts; otherwise, recycle the bolts along with the support brackets in a responsible manner.

12. Close the door and secure the latch.

13. If the leveling feet are not retracted, turn all four leveling feet until they are retracted as far into the cabinet as possible.

**NOTE**
The IAC-BD may be located to either the right or left of the UPS cabinet. This procedure assumes the installation will be on the left side of the UPS.

14. If line-up-and-match installation, remove the rectangular knockout on the bottom front side of the UPS and the IAC-BD (see Figure 11).

**CAUTION**
To prevent tipping when rolling the cabinet, push the cabinet from the rear whenever possible.

15. Roll the IAC-BD to the line-up-and-match installation location on the left side of the UPS cabinet making sure the doors are flush with each other or to the standalone installation location.

16. Use the leveling feet to align and level the IAC-BD vertically with the UPS cabinet.

17. Locate the top splice bracket shipped with the IAC-BD.

18. Remove the screws along each adjacent cabinet top panel securing the top panels. Retain the hardware for later use.

19. Install the top splice bracket between the adjacent cabinet and secure the tie strap with retained hardware.

**NOTE**
Optional front and back floor mounting brackets are available to order for permanently mounting the IAC-BD.

20. If permanently mounting the IAC-BD, proceed to Step 21; otherwise, continue to Step 24.

21. Locate the front and back floor mounting brackets from the optional floor mounting kit.

22. Using the cabinet mounting bolts from the kit, install the floor mounting brackets to the front and rear of the IAC-BD with the angle facing outward.

23. Secure the cabinet to the floor with customer-supplied hardware.

24. Proceed to paragraph 4.3 Two-Hole Barrel Lug Terminations to Bus Bar Installation.
Figure 11. Line-Up-and-Match Wiring Access Locations

Inter-cabinet wiring access to route interface wiring between cabinets.

Inter-cabinet wiring access knockouts. Remove knockouts as required to route power wiring between cabinets.
4.3 Two-Hole Barrel Lug Terminations to Bus Bar Installation

Paragraphs 4.4.1 IAC-BD with a Maintenance Bypass Breaker and Maintenance Isolation Switch and 4.4.2 IAC-BD with a MBP, MIS, and Bypass Input Breaker detail processes that require connecting input and output wiring using 2–hole barrel lugs. See Figure 12 for the hardware sequence when installing the lugs to the bus bars. Tighten the bolt to the torque value listed in Table 5.

**NOTE**
Conical washers are special purpose washers that look similar to flat washers, except for a slight conical shape. When installing conical washers, the top of the dome should be next to the bolt head and the base of the washer should be against the flat washer.

Figure 12. Typical Bus Bar Barrel Lug Mounting – Hardware Assembly Sequence
4.4 Installing IAC-BD External Power Wiring

**NOTE 1**
Power wiring from the UPS is routed through the inside bottom of the IAC-BD and UPS for line-up-and-match configurations using the pass-through wiring procedures or wiring can be installed using conduit between the cabinets for standalone installations using the top or bottom entry wiring procedures. Input and output power wiring is routed through the top or bottom of the cabinet using conduit.

**NOTE 2**
Line-up-and-match UPS phase power wiring is factory supplied coiled inside the bottom of the IAC-BD.

**NOTE 3**
Ferrules or two-hole barrel lugs are installed on the ends of the factory supplied cable harnesses. Do not shorten or cut factory supplied wiring.

**NOTE 4**
Remove the IAC-BD conduit landing plates to drill or punch conduit holes in the conduit plates (see Figure 13).

**NOTE 5**
Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for UPS installation procedures.

### 4.4.1 IAC-BD with a Maintenance Bypass Breaker and Maintenance Isolation Switch

To install wiring to terminal connections:

1. Verify the UPS system is turned off and all power sources are removed. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for UPS operating procedures.

2. Open the front door by lifting the latch from the bottom and turning to the right (counterclockwise) and swing the door open.

3. Remove the screws securing the top and bottom internal safety shield panels and remove the panels to gain access to the maintenance bypass input terminals, the Maintenance Isolation Switch (MIS) input and load bank terminals, and the subfeed breaker output terminals. Retain the hardware for later use.

4. If wiring the IAC-BD power terminals using the inter-cabinet wiring access pass-through (line-up-and-match configurations), proceed to **Step 5**; if wiring the IAC-BD power terminals using the bottom entry access, proceed to **Step 11**; if wiring the IAC-BD power terminals using the top entry access, proceed to **Step 16**.

5. **Pass-through Wiring.** Locate and remove the phase power cable harness labeled UPS OUTPUT (MIS input cables) packed inside the IAC-BD.

**NOTE**
UPS OUTPUT power cables (MIS input cables) have two-hole barrel lugs installed on the ends. Route the cable ends marked E9, E10, E11 to the UPS output terminals.

6. Route the IAC-BD UPS OUTPUT (MIS input) cables (phase A, B, and C) and Ground wire from the UPS cabinets through the bottom UPS and IAC-BD inter-cabinet wiring access pass-through to the IAC-BD MIS input terminals. See Figure 11 for IAC-BD wiring access information and Figure 14 for IAC-BD terminal locations. See paragraph 3.2.2 IAC-BD Power Wiring Preparation, Table 3, and Table 5 for IAC-BD wiring and termination requirements. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for the UPS terminal locations and termination requirements.

7. Remove the top or bottom conduit plate (see Figure 13) from the IAC-BD. Identify all input and output conduit requirements and mark their location. Drill and punch all conduit holes in the conduit plate prior to mounting on the IAC-BD. Reinstall the conduit plate. Install conduit between the IAC-BD and the maintenance bypass input source, and between the IAC-BD and the critical load. Pull the wiring through conduit into the wiring area.
8. Route the maintenance bypass input cables (phase A, B, and C) and Ground wire through the top or bottom of the IAC-BD to the maintenance bypass input terminals. See Figure 14 for IAC-BD terminal locations. See paragraph 3.2.2 IAC-BD Power Wiring Preparation, Table 3, and Table 4 for IAC-BD wiring and termination requirements.

9. Route the output cables (phase A, B, and C) and Ground wire from the IAC-BD subfeed breakers through the top or bottom of the cabinet to the critical load. See Figure 14 for IAC-BD terminal locations. See paragraph 3.2.2 IAC-BD Power Wiring Preparation, Table 3, and Table 5 for IAC-BD wiring and termination requirements.

11. **Bottom Entry Wiring.** Remove the bottom conduit plate (see Figure 13) from the IAC-BD. Identify all input and output conduit requirements and mark their location. Drill and punch all conduit holes in the conduit plate prior to mounting on the IAC-BD. Reinstall the conduit plate. Install conduit between the IAC-BD and the maintenance bypass input source, between the IAC-BD and the UPS output, and between the IAC-BD and the critical load. Pull the wiring through conduit into the wiring area.

12. Route the IAC-BD MIS input cables (phase A, B, and C) and Ground wire from the UPS cabinets through the bottom of the IAC-BD MIS input terminals. See Figure 14 for IAC-BD terminal locations. See paragraph 3.2.2 IAC-BD Power Wiring Preparation, Table 3, and Table 5 for IAC-BD wiring and termination requirements. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for the UPS terminal locations and termination requirements.
Figure 14. 93PM IAC-BD Power Terminal Locations – with MBP, MIS, and BIB

NOTE: The PM3 modules shown attached to the subfeed breakers are optional.
13. Route the maintenance bypass input cables (phase A, B, and C) and Ground wire through the bottom of the IAC-BD to the maintenance bypass input terminals.

14. Route the output cables (phase A, B, and C) and Ground wire from the IAC-BD subfeed breakers through the bottom of the cabinet to the critical load.

15. Proceed to Step 20.

16. **Top Entry Wiring.** Remove the top conduit plate (see Figure 13) from the IAC-BD. Identify all input and output conduit requirements and mark their location. Drill and punch all conduit holes in the conduit plate prior to mounting on the IAC-BD. Reinstall the conduit plate. Install conduit between the IAC-BD and the maintenance bypass input source, between the IAC-BD and the UPS output, and between the IAC-BD and the critical load. Pull the wiring through the conduit into the wiring area.

17. Route the IAC-BD MIS input cables (phase A, B, and C) and Ground wire from the UPS cabinets through the top of the IAC-BD to the IAC-BD MIS input terminals. See Figure 14 for IAC-BD terminal locations. See paragraph 3.2.2 IAC-BD Power Wiring Preparation, Table 3, and Table 5 for IAC-BD wiring and termination requirements. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for the UPS terminal locations and termination requirements.

18. Route the maintenance bypass input cables (phase A, B, and C) and Ground wire through the top of the IAC-BD to the maintenance bypass input terminals.

19. Route the output cables (phase A, B, and C) and Ground wire from the IAC-BD subfeed breakers through the top of the cabinet to the critical load.

20. Locate the external wiring terminal hardware kit packed at the bottom of the IAC-BD.

21. Using hardware from the external wiring terminal hardware kit, connect MIS phase A, B, and C and Ground power wiring to the corresponding MIS input terminals on the IAC-BD. For a detailed view of the IAC-BD MIS input terminals, see Figure 15.

22. Connect the MIS A, B, and C and Ground power wiring from the IAC-BD to the corresponding UPS output power terminals. For termination requirements and a detailed view of the UPS output terminals, refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information.

23. Using hardware from the external wiring terminal hardware kit, connect phase A, B, and C, and Ground maintenance bypass input power wiring from the utility source to the IAC-BD maintenance bypass input terminals.

   For a detailed view of the IAC-BD maintenance bypass input terminals, see Figure 16.

24. Connect the phase A, B, and C, and Ground output power wiring from the IAC-BD subfeed breaker output terminals to the critical loads.

   For a detailed view of the IAC-BD subfeed output terminals, see Figure 17 or Figure 18.

25. If wiring interface connections, proceed to paragraph 4.5 Installing IAC-BD Interface Connections; otherwise, proceed to Step 26.

26. Reinstall the internal safety shield panel removed in Step 3.

27. Close the outside door and secure the latch.

28. After the IAC-BD is installed and wired, return to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, to complete the UPS wiring.
Installation

Phase A (SF-1)
Phase B (SF-3)
Phase C (SF-5)

AC Output to Critical Load

Subfeed Breakers 1, 2, 3, and 4
4.4.2 IAC-BD with a MBP, MIS, and Bypass Input Breaker

To install wiring to terminal connections:

1. Verify the UPS system is turned off and all power sources are removed. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for UPS operating procedures.

2. Open the front door by lifting the latch from the bottom and turning to the right (counterclockwise) and swing the door open.
3. Remove the screws securing the top and bottom internal safety shield panels and remove the panels to gain access to the maintenance bypass input terminals, the Maintenance Isolation Switch (MIS) input and load bank terminals, the Bypass Input Breaker (BIB) terminals, and the subfeed breaker output terminals. Retain the hardware for later use.

4. If wiring the IAC-BD power terminals using the inter-cabinet wiring access pass-through (line-up-and-match configurations), proceed to Step 5; if wiring the IAC-BD power terminals using the bottom entry access, proceed to Step 11; if wiring the IAC-BD power terminals using the top entry access, proceed to Step 17.

5. **Pass-through Wiring.** Locate and remove the phase power cables harnesses labeled UPS OUTPUT (MIS input cables) and BIB packed inside the IAC-BD.

| NOTE 1 | UPS OUTPUT power cables (MIS input cables) have two-hole barrel lugs installed on the ends. Route the cable ends marked E9, E10, E11 to the UPS output terminals. |
| NOTE 2 | BIB power cables have two-hole barrel lugs installed on one end of the cable harness and ferrules on the other end. Route the two-hole barrel lug cable ends marked E6, E7, E8 to the UPS bypass input terminals. |

6. Route the IAC-BD UPS OUTPUT (MIS input) cables and BIB output cables (phase A, B, and C) and Ground wires from the UPS cabinets through the bottom UPS and IAC-BD inter-cabinet wiring access pass-through to the IAC-BD MIS input terminals and BIB output terminals. See Figure 11 for IAC-BD wiring access information and Figure 14 for IAC-BD terminal locations. See paragraph 3.2.2 IAC-BD Power Wiring Preparation, Table 3, and Table 4 for IAC-BD wiring and termination requirements. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for the UPS terminal locations and termination requirements.

7. Remove the top or bottom conduit plate (see Figure 13) from the IAC-BD. Identify all input and output conduit requirements and mark their location. Drill and punch all conduit holes in the conduit plate prior to mounting on the IAC-BD. Reinstall the conduit plate. Install conduit between the IAC-BD and the maintenance bypass input source, and between the IAC-BD and the critical load. Pull the wiring through conduit into the wiring area.

8. Route the maintenance bypass input cables (phase A, B, and C) and Ground wire through the top or bottom of the IAC-BD to the maintenance bypass input terminals.

9. Route the output cables (phase A, B, and C) and Ground wire from the IAC-BD subfeed breakers through the top or bottom of the cabinet to the critical load.

10. Proceed to Step 22.

11. **Bottom Entry Wiring.** Remove the bottom conduit plate from the IAC-BD. Identify all input and output conduit requirements and mark their location. Drill and punch all conduit holes in the conduit plate prior to mounting on the IAC-BD. Reinstall the conduit plate. Install conduit between the IAC-BD and the maintenance bypass input source, between the IAC-BD and the UPS bypass input, between the IAC-BD and the UPS output, and between the IAC-BD and the critical load. Pull the wiring through the conduit into the wiring area.

12. Route the IAC-BD MIS input cables (phase A, B, and C) and Ground wire from the UPS cabinets through the bottom of the IAC-BD to the IAC-BD MIS input terminals. See Figure 13 for IAC-BD wiring access information and Figure 14 for IAC-BD terminal locations. See paragraph 3.2.2 IAC-BD Power Wiring Preparation, Table 3, and Table 4 for IAC-BD wiring and termination requirements. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for the UPS terminal locations and termination requirements.

13. Route the IAC-BD BIB output cables (phase A, B, and C) and Ground wire from the UPS cabinets through the bottom of the IAC-BD to the IAC-BD BIB output terminals.

14. Route the maintenance bypass input cables (phase A, B, and C) and Ground wire through the bottom of the IAC-BD to the maintenance bypass input terminals.
15. Route the output cables (phase A, B, and C) and Ground wire from the IAC-BD subfeed breakers through the bottom of the cabinet to the critical load.

16. Proceed to Step 22.

17. **Top Entry Wiring.** Remove the top conduit plate (see Figure 13) from the IAC-BD. Identify all input and output conduit requirements and mark their location. Drill and punch all conduit holes in the conduit plate prior to mounting on the IAC-BD. Reinstall the conduit plate. Install conduit between the IAC-BD and the maintenance bypass input source, between the IAC-BD and the UPS bypass input, between the IAC-BD and the UPS output, and between the IAC-BD and the critical load. Pull the wiring through conduit into the wiring area.

18. Route the IAC-BD MIS input cables (phase A, B, and C) and Ground wire from the UPS cabinets through the top of the IAC-BD to the IAC-BD MIS input terminals. See Figure 14 for IAC-BD terminal locations. See paragraph 3.2.2 IAC-BD Power Wiring Preparation, Table 3, and Table 4 for IAC-BD wiring and termination requirements. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for the UPS terminal locations and termination requirements.

19. Route the IAC-BD BIB output cables (phase A, B, and C) and Ground wire from the UPS cabinets through the top of the IAC-BD to the IAC-BD BIB output terminals.

20. Route the maintenance bypass input cables (phase A, B, and C) and Ground wire through the top of the IAC-BD to the maintenance bypass input terminals.

21. Route the output cables (phase A, B, and C) and Ground wire from the IAC-BD subfeed breakers through the top of the cabinet to the critical load.

22. Locate the external wiring terminal hardware kit packed at the bottom of the IAC-BD.

23. Using hardware from the external wiring terminal hardware kit, connect MIS phase A, B, and C and Ground power wiring to the corresponding MIS input terminals on the IAC-BD.

   For a detailed view of the IAC-BD MIS input terminals, see Figure 15.

24. Connect the MIS A, B, and C and Ground power wiring from the IAC-BD to the corresponding UPS output power terminals. For termination requirements and a detailed view of the UPS output terminals, refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information.

25. Connect BIB phase A, B, and C and Ground power wiring to the corresponding BIB output terminals on the IAC-BD. For a detailed view of the IAC-BD BIB output terminals, see Figure 19.

26. Connect the BIB A, B, and C and Ground power wiring from the IAC-BD to the corresponding UPS bypass input power terminals.

27. Using hardware from the external wiring terminal hardware kit, connect phase A, B, and C, and Ground maintenance bypass input power wiring from the utility source to the IAC-BD maintenance bypass input terminals.

   For a detailed view of the IAC-BD maintenance bypass input terminals, see Figure 16.

28. Connect the phase A, B, and C, and Ground output power wiring from the IAC-BD subfeed breaker output terminals to the critical loads.

   For a detailed view of the IAC-BD subfeed output terminals, see Figure 17 or Figure 18.

29. If wiring interface connections, proceed to paragraph 4.5 Installing IAC-BD Interface Connections; otherwise, proceed to Step 30.

30. Reinstall the internal safety shield panel removed in Step 3.

31. Close the outside door and secure the latch.

32. After the IAC-BD is installed and wired, return to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, to complete the UPS wiring.
Installation

Figure 19. 93PM IAC-BD BIB Terminal Detail

BIB

AC Output from BIB to UPS Bypass

Phase A (BIB-2)
Phase B (BIB-4)
Phase C (BIB-6)
4.5 Installing IAC-BD Interface Connections

Use the procedures in the following paragraphs to connect the MBP, Solenoid Key Release Unit (Trapped Key), and PM3 interface connections.

NOTE Interface terminal blocks TB3 and TB4 (if installed) (see Figure 30 or Figure 31) are available as a convenience for the customer to monitor subfeed breaker status using customer installed monitoring equipment. These interface connections are not wired to the UPS.

4.5.1 MBP Auxiliary Contact Interface Connections

NOTE 1 MBP auxiliary contact control interface wiring can be installed using the inter-cabinet wiring access pass through (line-up-and-match configurations) or conduit between cabinets (standalone configurations).

NOTE 2 If using conduit, install the control wiring in separate conduit from the power wiring.

NOTE 3 Remove the IAC-BD interface conduit landing plates to drill or punch conduit holes in the conduit plate (see Figure 13).

NOTE 4 Disconnect terminal block plug from terminal block to wire plug.

NOTE 5 Keep Class 2 interface wiring separate from power wiring.

To install wiring:

1. Verify the UPS system is turned off and all power sources are removed. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for UPS operating procedures.

2. If not already opened, open the front door by lifting the latch from the bottom and turning to the right (counterclockwise) and swing the door open.

3. If not already removed, remove the screws securing the top and bottom internal safety shield panels and remove the panels to gain access to the interface terminals and conduit landing plates. Retain the hardware for later use.

4. If wiring the IAC-BD interface terminals using the inter-cabinet wiring access pass-through (line-up-and-match configurations), proceed to Step 5; if wiring the IAC-BD interface terminals using the bottom entry access, proceed to Step 7; if wiring the IAC-BD interface terminals using the top entry access, proceed to Step 10.

5. Pass-through Wiring. Route MBP control wiring between the IAC-BD interface terminals and the UPS interface terminals using the inter-cabinet wiring access pass-through. See Figure 11 for wiring access information, and Figure 20 for IAC-BD interface terminal locations. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for the UPS wiring access information, terminal locations, and termination requirements.

6. Proceed to Step 12.
7. **Bottom Entry Wiring.** Remove the bottom interface conduit plate (see Figure 13) from the inside bottom of the IAC-BD. Identify all conduit requirements and mark their location. Drill and punch all conduit holes in the bottom interface conduit plate prior to mounting on the IAC-BD. Install the conduit plate and install all conduit runs into the plate. Pull the wiring through the conduit into the wiring areas.

8. Route the MBP control wiring between the IAC-BD interface terminals and the UPS interface terminals using the bottom entry interface conduit landing plates on the IAC-BD (see Figure 13) and the UPS. Route the wiring along the left side of the cabinet (see Figure 21) to the terminals. Secure the wiring to the wire tie anchors provided (see Figure 22) using Zip ties. See Figure 20 for IAC-BD interface terminal locations.

9. Proceed to **Step 12**.

10. **Top Entry Wiring.** Remove the top interface conduit plate (see Figure 13) from the top of the IAC-BD. Identify all conduit requirements and mark their location. Drill and punch all conduit holes in the top interface conduit plate prior to mounting on the IAC-BD. Install the conduit plate and install all conduit runs into the plate. Pull the wiring through the conduit into the wiring area.

11. Route the MBP control wiring between the IAC-BD interface terminals and the UPS interface terminals using the top entry interface conduit landing plate on the IAC-BD and the UPS. See Figure 13 for wiring access information, and Figure 20 for IAC-BD interface terminal locations.

12. Connect the MBP control wiring to the IAC-BD and UPS terminals. See paragraph 3.2.3 IAC-BD Interface Wiring Preparation and Table 8 for terminal block wiring and termination requirements. See Table 9 for IAC-BD wiring information and terminal assignments.

For a detailed view of the IAC-BD terminals, see Figure 23.

13. If wiring Trapped Key interface connections, proceed to paragraph 4.5.2 Trapped Key Interface Connections (if installed); if wiring PM3 interface connections, proceed to paragraph 4.5.3 PM3 Interface Connections (if installed); otherwise, proceed to **Step 14**.
14. Reinstall the internal safety shield panels removed in Step 3.

15. Close the outside door and secure the latch.

16. After the IAC-BD is installed and wired, return to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, to complete the UPS wiring.

</tbody>
</table>

To install wiring:

1. Verify the UPS system is turned off and all power sources are removed. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for UPS operating procedures.

2. If not already installed, install the Eaton Industrial Relay Card (IRC). Refer to the user instructions supplied with the IRC or contact an Eaton service representative (see paragraph 1.8 Getting Help) for IRC installation and setup.

3. If not already opened, open the front door by lifting the latch from the bottom and turning to the right (counterclockwise) and swing the door open.

4. If not already removed, remove the screws securing the top and bottom internal safety shield panels and remove the panels to gain access to the interface terminals and conduit landing plates. Retain the hardware for later use.

5. If wiring the IAC-BD interface terminals using the inter-cabinet wiring access pass-through (line-up-and-match configurations), proceed to Step 6; if wiring the IAC-BD interface terminals using the bottom entry access, proceed to Step 8; if wiring the IAC-BD interface terminals using the top entry access, proceed to Step 11.

6. **Pass-through Wiring.** Route Trapped Key control wiring between the IAC-BD interface terminals and the UPS IRC terminals using the inter-cabinet wiring access pass-through. See Figure 11 for wiring access information, and Figure 20 for IAC-BD interface terminal locations. Refer to the user instructions supplied with the IRC for terminal locations and termination requirements.

8. **Bottom Entry Wiring.** Remove the bottom interface conduit plate (see Figure 13) from the inside bottom of the IAC-BD. Identify all conduit requirements and mark their location. Drill and punch all conduit holes in the bottom interface conduit plate prior to mounting on the IAC-BD. Install the conduit plate and install all conduit runs into the plate. Pull the wiring through the conduit into the wiring areas.

9. Route the Trapped Key control wiring between the IAC-BD interface terminals and the UPS IRC terminals using the bottom entry interface conduit landing plates on the IAC-BD and the UPS. Secure wiring to wire tie anchors along the right inside of IAC-BD.

11. **Top Entry Wiring.** Remove the top interface conduit plate (see Figure 13) from the top of the IAC-BD. Identify all conduit requirements and mark their location. Drill and punch all conduit holes in the top interface conduit plate prior to mounting on the IAC-BD. Install the conduit plate and install all conduit runs into the plate. Pull the wiring through the conduit into the wiring area.
12. Route the Trapped Key control wiring between the IAC-BD interface terminals and the UPS IRC terminals using the top entry conduit landing plates on the IAC-BD and the UPS.

13. Connect the Trapped Key control wiring to the IAC-BD and UPS IRC terminals. See paragraph 3.2.3 IAC-BD Interface Wiring Preparation and Table 10 for terminal block wiring and termination requirements. See Table 11 for IAC-BD wiring information and terminal assignments. Refer to the user instructions supplied with the IRC for IRC terminal assignments.

For a detailed view of the IAC-BD terminals, see Figure 24.

14. If wiring PM3 interface connections, proceed to paragraph 4.5.3 PM3 Interface Connections (if installed); otherwise, proceed to Step 15.

15. Reinstall the internal safety shield panels removed in Step 4.

16. Close the outside door and secure the latch.

17. After the IAC-BD is installed and wired, return to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, to complete the UPS wiring.

**Figure 24. IAC-BD Trapped Key Interface Terminal Detail**

**NOTE** “Return” indicates connection to electronics circuit ground. “Common” indicates connection to common side of isolated relay contact.

4.5.3 PM3 Interface Connections (if installed)

**NOTE 1** Interface terminal block TB5 (see Figure 30 or Figure 31) is used to connect an optional Eaton PM3 Branch Circuit Monitoring System (BCMS) to outside equipment such as an Eaton Power Xpert Gateway 400 for customer subfeed metering applications. This interface connection is not wired to the UPS.

**NOTE 2** PM3 control wiring is installed using conduit between the IAC-BD and monitoring device.

**NOTE 3** Install the control wiring in separate conduit from the power wiring.

**NOTE 4** Remove the IAC-BD interface conduit landing plates to drill or punch conduit holes in the conduit plate.

**NOTE 5** Disconnect terminal block plug from terminal block to wire plug.

**NOTE 6** Keep Class 2 interface wiring separate from power wiring.

**NOTE 7** For more information refer to the Eaton Instruction Leaflet IL01219085E and Application Note TD17513_APPNOTE.

To install wiring:

1. Verify the UPS system is turned off and all power sources are removed. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for UPS operating procedures.

2. If not already opened, open the front door by lifting the latch from the bottom and turning to the right (counterclockwise) and swing the door open.

3. If not already removed, remove the screws securing the top and bottom internal safety shield panels and remove the panels to gain access to the interface terminals and conduit landing plates. Retain the hardware for later use.
4. If wiring the IAC-BD interface terminals using the bottom entry access, proceed to Step 5; if wiring the IAC-BD interface terminals using the top entry access, proceed to Step 8.

5. **Bottom Entry Wiring.** Remove the bottom interface conduit plate (see Figure 13) from the inside bottom of the IAC-BD. Identify all conduit requirements and mark their location. Drill and punch all conduit holes in the bottom interface conduit plate prior to mounting on the IAC-BD. Install the conduit plate and install all conduit runs into the plate. Pull the wiring through the conduit into the wiring areas.

6. Route the PM3 control wiring between the IAC-BD interface terminals and the Power Xpert Gateway terminals using the bottom entry interface conduit landing plates on the IAC-BD (see Figure 25). Route the wiring along the left side of the cabinet to the terminals. Secure the wiring to the wire tie anchors provided (see Figure 22) using Zip ties. See Figure 20 for IAC-BD interface terminal locations. Refer to the user instructions supplied with the Gateway for terminal locations and termination requirements.

7. Proceed to Step 10.

8. **Top Entry Wiring.** Remove the top interface conduit plate from the top of the IAC-BD. Identify all conduit requirements and mark their location. Drill and punch all conduit holes in the top interface conduit plate prior to mounting on the IAC-BD. Install the conduit plate and install all conduit runs into the plate. Pull the wiring through the conduit into the wiring area.

9. Route the PM3 control wiring between the IAC-BD interface terminals and the Power Xpert Gateway terminals using the top entry interface conduit landing plates on the IAC-BD. See Figure 13 for wiring access information, and Figure 20 for IAC-BD interface terminal locations. Refer to the user instructions supplied with the Gateway for terminal locations and termination requirements.

10. Connect the PM3 control wiring to the IAC-BD and Gateway terminals. See paragraph 3.2.3 IAC-BD Interface Wiring Preparation and Table 12 for terminal block wiring and termination requirements. See Table 13 for IAC-BD wiring information and terminal assignments. Refer to the user instructions supplied with the Gateway for Gateway terminal assignments.

    For a detailed view of the IAC-BD terminals, see Figure 25.

11. Reinstall the internal safety shield panels removed in Step 3.

12. Close the outside door and secure the latch.

13. After the IAC-BD is installed and wired, return to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, to complete the UPS wiring.

NOTE “Return” indicates connection to electronics circuit ground. “Common” indicates connection to common side of isolated relay contact.
4.6 Initial Startup

Startup and operational checks must be performed by an authorized Eaton Customer Service Engineer, or the warranty terms specified in Chapter 9 Warranty become void. This service is offered as part of the sales contract for the UPS. Contact an Eaton service representative in advance (usually a two-week notice is required) to reserve a preferred startup date.

4.7 Completing the Installation Checklist

The final step in installing the IAC-BD is completing the following Installation Checklist. This checklist ensures that you have completely installed all hardware, cables, and other equipment. Complete all items listed on the checklist to ensure a smooth installation. Make a copy of the Installation Checklist before filling it out, and retain the original.

After the installation is complete, an Eaton Customer Service Engineer must verify the operation of the UPS system and commission it to support the critical load. The service representative cannot perform any installation tasks other than verifying software and operating setup parameters. Service personnel may request a copy of the completed Installation Checklist to verify all applicable equipment installations have been completed.

NOTE
The Installation Checklist MUST be completed prior to starting the UPS system for the first time.

4.7.1 Installation Checklist

- All packing materials and restraints have been removed from each cabinet.
- The IAC-BD is installed on a level floor suitable for computer or electronic equipment.
- The IAC-BD is placed in its installed location.
- The IAC-BD is secured to the building floor, if required.
- All conduits and cables are properly routed between the IAC-BD and the UPS.
- All power cables are properly sized and terminated.
- Subfeed circuit breakers are wired to load.
- A ground conductor is properly installed.
- Interface wiring between the IAC-BD and UPS cabinets is properly installed.
- All terminal cover plates are installed.
- Air conditioning equipment is installed and operating correctly.
- The area around the UPS system is clean and dust-free.
- Adequate workspace exists around the IAC-BD and other cabinets.
- Adequate lighting is provided around all IAC-BD and UPS equipment.
- A 120 Vac service outlet is located within 7.5m (25 ft) of the IAC-BD and UPS equipment.
- Startup and operational checks are performed by an authorized Eaton Customer Service Engineer.
Chapter 5  Onelines and Schematics

5.1  Onelines

Figure 26 and Figure 27 show the simplified internal structure of the Integrated Accessory Cabinet-Bypass and Distribution (IAC-BD) for the following configurations:

- Two-breaker Maintenance Bypass with a Maintenance Isolation Breaker (MIS) and a Maintenance Bypass Breaker (MBP)
- Three-breaker Maintenance Bypass with a MIS, a MBP, and a Bypass Input Breaker (BIB)

Chapter 6  Integrated Accessory Cabinet-Bypass and Distribution Operating Instructions

This section describes how to operate the Integrated Accessory Cabinet-Bypass and Distribution (IAC-BD).

NOTE 1  Before using the IAC-BD, ensure all installation tasks are complete and a preliminary startup has been performed by authorized service personnel. The preliminary startup verifies all electrical interconnections to ensure the installation was successful and the system operates properly.

NOTE 2  Read this section of the manual and have thorough knowledge of UPS and IAC-BD operation before attempting to operate any of the controls.

6.1  IAC-BD Breakers

The descriptions provide a brief overview of the IAC-BD breaker use. Figure 34 and Figure 35 identify and show the location of the breakers on the IAC-BD.

- **Maintenance Bypass Breaker**  – The Maintenance Bypass Breaker (MBP) transfers the load from the UPS output to the bypass input feeder.

- **Maintenance Isolation Breaker**  – The Maintenance Isolation Breaker (MIS) isolates the UPS from the bypass feed and the load.

- **Bypass Input Breaker**  – (Optional – only three breaker configurations) The Bypass Input Breaker (BIB) provides a single point of input power control to the UPS on single-feed systems or bypass input power control to the UPS on dual-feed systems. Using the BIB easily removes power from the UPS for servicing.

- **Subfeed Breakers**  – Two to four subfeed breakers to distribute output power from the UPS to Power Distribution Units or larger high current critical loads.

6.2  Using the UPS when an IAC-BD is Installed

To operate the IAC-BD:

1. Open the front door by lifting the latch from the bottom and turning to the right (counterclockwise) and swing the door open.

2. Close the IAC-BD maintenance bypass input feeder circuit breaker.

3. Verify that the IAC-BD circuit breakers are set as follows (see Figure 34 or Figure 35 for breaker locations):

<table>
<thead>
<tr>
<th>Breaker</th>
<th>Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>MBP</td>
<td>OPEN</td>
</tr>
<tr>
<td>MIS</td>
<td>CLOSED</td>
</tr>
<tr>
<td>BIB (if installed)</td>
<td>CLOSED</td>
</tr>
<tr>
<td>Subfeed Breakers</td>
<td>OPEN</td>
</tr>
</tbody>
</table>

4. Start the UPS. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 *For More Information*, for UPS operating procedures.

5. Close the installed subfeed breakers as required.

6. Close the door and secure the latch.
Figure 34. 93PM IAC-BD Breakers – Bypass Interlock Plate

- Subfeed Breaker 1
- Subfeed Breaker 2
- Bypass Input Breaker (BIB) (optional)
- Subfeed Breaker 4 (optional)
- Subfeed Breaker 3 (optional)
- Bypass Interlock Plate
- Maintenance Isolation Breaker (MIS)
- Maintenance Bypass Breaker (MBP)

6.3 IAC-BD Operation – Bypass Interlock Plate

6.3.1 Transferring the UPS to Maintenance Bypass

**CAUTION**

Only trained personnel familiar with the operation of this equipment should transfer loads. Failure to follow this transfer sequence may cause loss of power to loads.

**CAUTION**

In Bypass mode, the critical load is not protected from commercial power interruptions and abnormalities.

To transfer the load to maintenance bypass:

1. Open the front door by lifting the latch from the bottom and turning to the right (counterclockwise) and swing the door open.
2. Verify the BIB (if installed) is closed.
3. Transfer the UPS from normal mode to bypass mode. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for UPS operating procedures.

**WARNING**

Power is present inside the cabinets.
Failure to close the MBP before opening the MIS will result in the loss of power to the critical load.

4. Close the MBP.
5. Slide the bypass interlock plate to the left (see Figure 34).
6. Open the MIS.

   The critical load is supplied by the maintenance bypass source.

7. Shut down the UPS. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for UPS operating procedures.

---

**WARNING**

The BIB (if installed) or the bypass feeder breaker must be opened to electrically isolate the UPS.

8. If installed, open the BIB.
9. Close the door and secure the latch.

---

**6.3.2 Transferring the UPS from Maintenance**

---

**CAUTION**

Only trained personnel familiar with the operation of this equipment should transfer loads. Failure to follow this transfer sequence may cause loss of power to loads.

To transfer the load from maintenance:

1. Open the front door by lifting the latch from the bottom and turning to the right (counterclockwise) and swing the door open.
2. If installed, close the BIB.
3. Start the UPS in bypass mode. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for UPS operating procedures.

---

**CAUTION**

Failure to close the MIS before opening the MBP will result in the loss of power to the critical load.

4. Close the MIS.
5. Slide the bypass interlock plate to the right (see Figure 34).
6. Open the MBP.
7. Close the door and secure the latch.
8. Transfer the UPS to Normal mode. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for UPS operating procedures.
6.4 IAC-BD Operation – Kirk Key Interlock

6.4.1 Transferring the UPS to Maintenance Bypass

**CAUTION**

Only trained personnel familiar with the operation of this equipment should transfer loads. Failure to follow this transfer sequence may cause loss of power to loads.

**CAUTION**

In Bypass mode, the critical load is not protected from commercial power interruptions and abnormalities.

1. Open the front door by lifting the latch from the bottom and turning to the right (counterclockwise) and swing the door open.
2. Verify the BIB (if installed) is closed.
3. Transfer the UPS from normal mode to bypass mode. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for UPS operating procedures.

**WARNING**

Power is present inside the cabinets.

4. Verify the UPS on Bypass indicator on the IAC-BD is illuminated (see Figure 36).

**NOTE**

Key “A” can be removed from the solenoid lock only when the UPS on Bypass indicator is illuminated indicating the UPS is on bypass.

5. Press and hold the solenoid lock pushbutton. Unlock and remove key “A” from the solenoid lock (see Figure 36).

**CAUTION**

Failure to close the MBP before opening the MIS will result in the loss of power to the critical load.

6. Insert key “A” into lock “A” on the MBP Kirk key lock. Unlock and close the MBP.
7. Remove key “B” from the MBP Kirk key lock “B”.
8. Insert key “B” into lock “B” on the MIS Kirk key lock. Open the MIS.
9. Lock the MIS and remove key “A” from the MIS Kirk key lock “A”.
10. Insert key “A” into the solenoid lock and lock.

The critical load is supplied by the maintenance bypass source.

11. Shut down the UPS. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for UPS operating procedures.

**WARNING**

The BIB (if installed) or the bypass feeder breaker must be opened to electrically isolate the UPS.

12. If installed, open the BIB.
13. Close the door and secure the latch.
6.4.2 Transferring the UPS from Maintenance Bypass

**CAUTION**

Only trained personnel familiar with the operation of this equipment should transfer loads. Failure to follow this transfer sequence may cause loss of power to loads.

To transfer the load from maintenance:

1. Open the front door by lifting the latch from the bottom and turning to the right (counterclockwise) and swing the door open.
2. If installed, close the BIB.
3. Start the UPS in bypass mode. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for UPS operating procedures.
4. Press and hold the solenoid lock pushbutton. Unlock and remove key “A” from the solenoid lock (see Figure 36).

**CAUTION**

Failure to close the MIS before opening the MBP will result in the loss of power to the critical load.

5. Insert key “A” into lock “A” on the MIS Kirk key lock. Unlock and close the MIS.
6. Remove key “B” from the MIS Kirk key lock “B”.
7. Insert key “B” into lock “B” on the MBP Kirk key lock. Open the MBP.
8. Lock the MBP and remove key “A” from the MBP Kirk key lock “A”.
9. Insert key “A” into the solenoid lock and lock.
10. Close the front door and secure the latch.
11. Transfer the UPS to Normal mode. Refer to the applicable Eaton 93PM UPS Installation and Operation manual, listed in paragraph 1.7 For More Information, for UPS operating procedures.
Chapter 7  Maintenance

The components inside the Integrated Accessory Cabinet-Bypass and Distribution (IAC-BD) are secured to a sturdy metal frame. All repairable parts and assemblies are located for easy removal, with very little disassembly. This design allows authorized service personnel to quickly perform routine maintenance and servicing.

You must schedule periodic performance checks of the UPS system to keep it running properly. Regular routine checks of operation and system parameters enable your system to function efficiently for many trouble-free years.

7.1  Important Safety Instructions

Remember that your UPS system is designed to supply power **EVEN WHEN DISCONNECTED FROM THE UTILITY POWER**.

---

**WARNING**

- No user serviceable components.
- Servicing and maintenance should be performed by qualified service personnel only.
- **LETHAL VOLTAGE PRESENT.** This unit should not be operated with the cabinet doors open or protective panels removed. Do not make any assumptions about the electrical state of any cabinet in the UPS system.

---

7.2  Performing Preventive Maintenance

The UPS system including the IAC-BD requires very little preventive maintenance. However, the system should be inspected periodically to verify that the units are operating normally. Record maintenance results and any corrective actions in a suitable log.

7.2.1  DAILY Maintenance

Perform the following steps daily:

1. Check the area surrounding the UPS system and IAC-BD. Ensure the area is not cluttered, allowing free access to the unit.
2. Ensure the air intakes on the Accessory cabinets are not blocked.
3. Ensure the operating environment is within the parameters specified in paragraph 3.2.1 Environmental and Installation Considerations and Chapter 8 Product Specifications.

7.2.2  PERIODIC Maintenance

Periodic inspections of the IAC-BD should be made to determine if components, wiring, and connections exhibit evidence of overheating. Particular attention should be given to the compression lug connections. Maintenance procedures should specify that the compression lug connections be retorqued to values listed in this manual.

7.2.3  ANNUAL Maintenance

Annual preventive maintenance should be performed only by authorized service personnel familiar with maintenance and servicing of the UPS system. Contact an Eaton service representative for more information about service offerings.
7.3  Maintenance Training

A basic training course, available from Eaton, gives you a competent working knowledge of the UPS system operation and teaches you how to perform first level corrective maintenance. For more information about training and other services, contact the Customer Reliability Center (see paragraph 1.8 Getting Help).
Chapter 8  Product Specifications

This section provides the following specifications:

- Model Numbers
- Input specifications
- Output specifications
- Environmental and safety specifications

8.1 Model Numbers

The Integrated Accessory Cabinet-Bypass and Distribution (IAC-BD) is available in one model to meet the needs of the Eaton 93PM 400 kW UPS product line.

<table>
<thead>
<tr>
<th>Integrated Accessory Cabinet-Bypass and Distribution (IAC-BD) Model</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Eaton 93PM 400 kW IAC-BD (480V/480V)</td>
<td>IAC-BD for Eaton 93PM 400 kW UPS Frame</td>
</tr>
</tbody>
</table>

8.2 Specifications

The following sections detail the input, output, and environmental and safety specifications for the IAC-BD.

8.2.1 Input

<table>
<thead>
<tr>
<th>Operating Input Voltage Range</th>
<th>480 Vac, 60 Hz</th>
</tr>
</thead>
<tbody>
<tr>
<td>Input Wiring</td>
<td>3 wire + ground – No neutral</td>
</tr>
<tr>
<td>Operating Frequency Range</td>
<td>60 Hz ± 5 Hz</td>
</tr>
<tr>
<td>Operating Input Current</td>
<td>See Table 3 or Table 4.</td>
</tr>
</tbody>
</table>

8.2.2 Output

<table>
<thead>
<tr>
<th>Operating Output Voltage</th>
<th>480 Vac, 60 Hz</th>
</tr>
</thead>
<tbody>
<tr>
<td>Output Wiring</td>
<td>3 wire + ground – No neutral</td>
</tr>
<tr>
<td>Operating Output Frequency Range</td>
<td>60 Hz ± 5 Hz</td>
</tr>
<tr>
<td>Output Current</td>

Chapter 9  Warranty

9.1  Limited Factory Warranty for Three-Phase Eaton 93PM UPS and 93PM UPS Accessory Products

WARRANTOR: The warrantor for the limited warranties set forth herein is Eaton (“Eaton”).

LIMITED WARRANTY: This limited warranty (this “Warranty”) applies only to the original end-user (the “End-User”) of the Eaton Three-Phase 93PM UPS and 93PM UPS Accessory Products (the “Product”) and cannot be transferred. This restriction applies even in the event that the Product is initially sold by Eaton for resale to an EndUser. This Warranty gives you specific legal rights, and you may also have other rights which vary from State to State (or jurisdiction to jurisdiction).

WHAT THIS LIMITED WARRANTY COVERS: The warrantor warrants, with the terms of this Warranty, that the Eaton three-phase UPS electronics, Eaton-built accessories, and Eaton-built battery cabinets (individually and collectively, the “Warranted Items”) are free from defects in material and workmanship.

For Product installed (and currently located) in the fifty (50) United States and the District of Columbia, if, in the opinion of Eaton, a Warranted Item is defective, Eaton’s sole obligation, at the option of Eaton, will be to refurbish or replace such defective Warranted Item (including the costs of providing diagnosis, service, and labor (“labor coverage”). The defective Warranted Item will be refurbished or replaced onsite at the End-User’s location or such other location as determined by Eaton. Any parts that are replaced may be new or reconditioned. All parts replaced by Eaton shall become the property of Eaton.

For Product installed (and currently located) outside the fifty (50) United States and the District of Columbia, if, in the opinion of Eaton, a Warranted Item is defective, Eaton’s sole obligation, at the option of Eaton, will be to refurbish or replace such defective Warranted Item (not including the costs of labor coverage). The defective Warranted Item will be refurbished or replaced onsite at the End-User’s location or such other location as determined by Eaton. Any parts that are replaced may be new or reconditioned. All parts replaced by Eaton shall become the property of Eaton.

LIMITED WARRANTY PERIOD: The period covered by this Warranty for Product installed (and currently located) in the fifty (50) United States and the District of Columbia is six (6) months from the date of Product purchase for labor coverage when no startup is performed by an authorized Eaton Customer Service Engineer or Agent or twelve (12) months from the date of Product purchase with startup performed by an authorized Eaton Customer Service Engineer or Agent and twelve (12) months from the date of Product purchase or eighteen (18) months from date of Product shipment, whichever occurs first, for the refurbishment/replacement of parts.

The period covered by this Warranty for Product installed (and currently located) outside the fifty (50) United States and the District of Columbia is twelve (12) months from the date of Product purchase or eighteen (18) months from the date of Product shipment, whichever occurs first, for the refurbishment/replacement of parts.

WHAT THIS LIMITED WARRANTY DOES NOT COVER: This Warranty does not cover any defects or damages caused by: (a) failure to properly store the Product before installation, including the “trickle charge” of batteries no later than the date indicated on the packaging; (b) shipping and delivery of the Product if shipping is FOB Factory; (c) neglect, accident, fire, flood, lightning, vandalism, acts of God, Customer’s neglect, abuse, misuse, misapplication, incorrect installation; (d) repair or alteration not authorized in writing by Eaton personnel or performed by an authorized Eaton Customer Service Engineer or Agent; or (e) improper testing, operation, maintenance, adjustment, or any modification of any kind not authorized in writing by Eaton personnel or performed by an authorized Eaton Customer Service Engineer or Agent.

This Warranty is not valid: if the Product’s serial numbers have been removed or are illegible. Any Warranted Items repaired or replaced pursuant to this Warranty will be warranted for the remaining portion of the original Warranty subject to all the terms thereof. Eaton does not provide a labor warranty for Product located outside of the fifty (50) United States or the District of Columbia. Any equipment, parts, or materials included in the Product and not manufactured by Eaton are warranted solely by the manufacturer of such equipment, parts, or materials and are not included as part of this Warranty. Batteries are not warranted by Eaton.

WARRANTOR: The warrantor for the limited warranties set forth herein is Eaton (“Eaton”).

LIMITED WARRANTY: This limited warranty (this “Warranty”) applies only to the original end-user (the “End-User”) of the Eaton Three-Phase 93PM UPS and 93PM UPS Accessory Products (the “Product”) and cannot be transferred. This restriction applies even in the event that the Product is initially sold by Eaton for resale to an EndUser. This Warranty gives you specific legal rights, and you may also have other rights which vary from State to State (or jurisdiction to jurisdiction).

WHAT THIS LIMITED WARRANTY COVERS: The warrantor warrants, with the terms of this Warranty, that the Eaton three-phase UPS electronics, Eaton-built accessories, and Eaton-built battery cabinets (individually and collectively, the “Warranted Items”) are free from defects in material and workmanship.

For Product installed (and currently located) in the fifty (50) United States and the District of Columbia, if, in the opinion of Eaton, a Warranted Item is defective, Eaton’s sole obligation, at the option of Eaton, will be to refurbish or replace such defective Warranted Item (including the costs of providing diagnosis, service, and labor (“labor coverage”). The defective Warranted Item will be refurbished or replaced onsite at the End-User’s location or such other location as determined by Eaton. Any parts that are replaced may be new or reconditioned. All parts replaced by Eaton shall become the property of Eaton.

For Product installed (and currently located) outside the fifty (50) United States and the District of Columbia, if, in the opinion of Eaton, a Warranted Item is defective, Eaton’s sole obligation, at the option of Eaton, will be to refurbish or replace such defective Warranted Item (not including the costs of labor coverage). The defective Warranted Item will be refurbished or replaced onsite at the End-User’s location or such other location as determined by Eaton. Any parts that are replaced may be new or reconditioned. All parts replaced by Eaton shall become the property of Eaton.

LIMITED WARRANTY PERIOD: The period covered by this Warranty for Product installed (and currently located) in the fifty (50) United States and the District of Columbia is six (6) months from the date of Product purchase for labor coverage when no startup is performed by an authorized Eaton Customer Service Engineer or Agent or twelve (12) months from the date of Product purchase with startup performed by an authorized Eaton Customer Service Engineer or Agent and twelve (12) months from the date of Product purchase or eighteen (18) months from date of Product shipment, whichever occurs first, for the refurbishment/replacement of parts.

The period covered by this Warranty for Product installed (and currently located) outside the fifty (50) United States and the District of Columbia is twelve (12) months from the date of Product purchase or eighteen (18) months from the date of Product shipment, whichever occurs first, for the refurbishment/replacement of parts.

WHAT THIS LIMITED WARRANTY DOES NOT COVER: This Warranty does not cover any defects or damages caused by: (a) failure to properly store the Product before installation, including the “trickle charge” of batteries no later than the date indicated on the packaging; (b) shipping and delivery of the Product if shipping is FOB Factory; (c) neglect, accident, fire, flood, lightning, vandalism, acts of God, Customer’s neglect, abuse, misuse, misapplication, incorrect installation; (d) repair or alteration not authorized in writing by Eaton personnel or performed by an authorized Eaton Customer Service Engineer or Agent; or (e) improper testing, operation, maintenance, adjustment, or any modification of any kind not authorized in writing by Eaton personnel or performed by an authorized Eaton Customer Service Engineer or Agent.

This Warranty is not valid: if the Product’s serial numbers have been removed or are illegible. Any Warranted Items repaired or replaced pursuant to this Warranty will be warranted for the remaining portion of the original Warranty subject to all the terms thereof. Eaton does not provide a labor warranty for Product located outside of the fifty (50) United States or the District of Columbia. Any equipment, parts, or materials included in the Product and not manufactured by Eaton are warranted solely by the manufacturer of such equipment, parts, or materials and are not included as part of this Warranty. Batteries are not warranted by Eaton.
THIS WARRANTY IS THE ENDUSER’S SOLE REMEDY AND IS EXPRESSLY IN LIEU OF, AND THERE ARE NO OTHER, EXRESSED OR IMPLIED GUARANTEES OR WARRANTIES (INCLUDING ANY IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PURPOSE, WHICH ARE EXPRESSLY DISCLAIMED). SOME STATES OR JURISDICTIONS DO NOT ALLOW THE EXCLUSION OF EXPRESS OR IMPLIED WARRANTIES, SO THE ABOVE EXCLUSION MAY NOT APPLY TO YOU. IN THAT EVENT, SUCH WARRANTIES ARE LIMITED IN DURATION TO THE LIMITED WARRANTY PERIOD. SOME STATES OR JURISDICTIONS DO NOT ALLOW LIMITATIONS ON HOW LONG AN IMPLIED WARRANTY LASTS OR THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THE ABOVE LIMITATIONS AND/OR EXCLUSIONS MAY NOT APPLY TO YOU.

LIMITATION OF LIABILITY: In no event shall Eaton be liable for any indirect, incidental, special or consequential damages of any kind or type whatsoever, resulting from or in connection with any claim or cause of action, whether brought in contract or in tort (including negligence and strict liability). Some States or jurisdictions do not allow the exclusion of limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you. Eaton shall not be responsible for failure to provide service or parts due to causes beyond Eaton’s reasonable control. In no case will Eaton’s liability under this Warranty exceed the replacement value of the Warranted Items.

END-USER’S OBLIGATIONS: In order to receive the benefits of this Warranty, the End-User must register the product warranty (via mail or online at www.eaton.com/pg/register “product registration”); use the Product in a normal way; follow the Product’s user’s guide; and protect against further damage to the Product if there is a covered defect.

OTHER LIMITATIONS: Eaton’s obligations under this Warranty are expressly conditioned upon receipt by Eaton of all payments due to it (including interest charges, if any). During such time as Eaton has not received payment of any amount due to it for the Product, in accordance with the contract terms under which the Product is sold, Eaton shall have no obligation under this Warranty. Also during such time, the period of this Warranty shall continue to run and the expiration of this Warranty shall not be extended upon payment of any overdue or unpaid amounts.

COSTS NOT RELATED TO WARRANTY: The End-User shall be invoiced for, and shall pay for, all services not expressly provided for by the terms of this Warranty, including without limitation site calls involving an inspection that determines no corrective maintenance is required. Any costs for replacement equipment, installation, materials, freight charges, travel expenses, or labor of Eaton representatives outside the terms of this Warranty will be borne by the End-User.

OBTAINING WARRANTY SERVICE: In the USA, call the Eaton Customer Reliability Center 7x24 at 800-843-9433. Outside of the USA, call your local Eaton sales or service representative, or call the Eaton Customer Reliability Center in the United States at 919845-3633. For comments or questions about this Limited Factory Warranty, write to the Customer Quality Representative, 8609 Six Forks Road, Raleigh, North Carolina 27615 USA.
