

Eaton Announces Industry-leading Power Rating For The Eaton 9395 UPS For Large Data Centers in Europe, The Middle East and Africa

June 22, 2009 ... Diversified industrial manufacturer Eaton Corporation today launched its industry-leading 1110 kVA extended power rating for the Eaton 9395 uninterruptible power system (UPS) in Europe, the Middle East and Africa (EMEA).

The 9395 1100 kVA UPS, part of the Powerware® series, further extends the power rating from the 825 kVA system that was launched in EMEA in December 2008. The leading kVA rating in the industry targets the largest data centers, and the multi-module, paralleling capabilities give Eaton's customers tremendous flexibility to precisely match any current or future power needs.

"Eaton continually looks to meet the industry demand for innovative, larger power systems while maintaining the same power performance, energy savings, reliability, flexibility and small footprint features that have defined Eaton's mission-critical UPSs for decades," said Jorma Mannerkoski, director, sales and marketing for the Power Quality business of Eaton's Electrical Sector in EMEA.

"The 9395 transformerless technology allows higher operating efficiencies and smaller footprint which translate into reduced utility costs and space savings. As you move into higher power, the related cost savings are more significant," said Mannerkoski. "We want our customers to benefit from decreased total cost of ownership and help companies operate to meet their green strategies."

The Eaton 9395 1100kVA will be available for shipment in July 2009.
