

Eaton to Present at the 2009 Network World IT Roadmap Conference and Expo Series

July 10, 2009 ... Eaton Corporation today announced it will participate in the Network World IT Roadmap Conference and Expo on July 14 in Philadelphia. In addition to a presentation that will be delivered during the data center track, Eaton is contributing as a platinum sponsor and will host a booth during the exposition.

Aaron Stephens, Eaton field sales engineer, will deliver the presentation “Design considerations for rackmount power distribution: Eight steps to understand for cost requirements.” Attendees will learn how to analyze their power requirements and compare power solutions in order to make the most efficient use of resources to deliver a meaningful impact on their data center’s bottom line.

“Data center managers must stay abreast of new equipment and power solutions, a difficult task when this information constantly changes and technology advances so frequently,” said Stephens. “Network World’s IT Roadmap is the ideal forum to collaborate with other Information Technology (IT) professionals and learn best practices for managing a flexible, scalable, high-density data center in a manner that is consistent with an organization’s business objectives.”

Network World’s IT Roadmap Philadelphia is a one day event that combines a professional conference with a private expo of nine mission-critical topics of enterprise IT. Attendees include IT professionals from companies throughout the region and various solutions providers. IT Roadmap Philadelphia is the sixth in a series of 10 IT Roadmap events held in 2009 throughout the country.
