

Eaton To Present At DatacenterDynamics Conference In Seattle

August 5, 2009 ... Eaton Corporation today announced that it will participate in the DatacenterDynamics Conference and Exposition August 6 in Seattle. In addition to serving as a gold sponsor and hosting a booth, an Eaton representative will deliver a presentation.

Dr. Kenneth Uhlman, director of data center business development for Eaton's electrical business, will speak at the conference. He will discuss solutions for organizations that can be implemented today to save energy, free stranded capacities and position themselves to meet their sustainability goals. Dr. Uhlman will present practical and affordable ways to help Information Technology (IT) professionals increase revenue, reduce expenses and their carbon footprint while meeting increased regulatory pressures and managing risk.

"Many organizations are seeking ways to increase the efficiency of their data centers while ensuring continued performance and security," said Dr. Uhlman. "There are new tools and solutions available today that can help organizations simplify the challenge of adopting sustainable practices while ensuring the global data center continues to operate flexibly and reliably support mission critical operations."

As a focal point for end-users, consultants and solution providers, the DatacenterDynamics Conference & Expo is Seattle's largest gathering of professionals involved in the design, build and operational management of 24/7 mission critical IT facilities. It is an unrivalled education and networking opportunity for the industry, where the regular audience is characterized by senior representatives of the of the financial, medical, media, service provider, outsourcing/managed services and other Fortune 500 companies operating throughout Seattle, Silicon Valley and the Western United States.

At the Seattle DatacenterDynamics, Eaton will host a booth to showcase its solutions to the top challenges facing today's data center managers. Eaton continues to raise the industry standard for energy efficiency and unfailing performance, expertly addressing the issues arising from a combination of ever-increasing power demands and high-density computing environments.
