

Eaton Launches Power Quality Customer Success Story Portal

August 12, 2009 ... Eaton Corporation today announced it has launched a new customer success story portal on its Power Quality Web site to showcase real-life applications of its products and services. The portal contains more than 60 customer stories which can be sorted by product/service or by industry.

Customers around the world depend on uninterruptible power systems (UPSs), services and power quality solutions from Eaton to keep their Information Technology (IT) applications up and running without interruption. These success stories exemplify how customers rely on Eaton every day to properly power, maintain and protect their mission-critical infrastructure.

For example, an industry search for “Colleges and Universities” displays several success stories where Eaton has supported the education industry. Blackhawk College based in Illinois installed the Eaton 9355 UPS to improve availability while offering the scalability it needed to complete plans for an upcoming data center migration.

A product search for the Eaton 9395 UPS shares success stories specific to this award-winning, three-phase solution. Visitors can read how BMW Sauber used the 9395 to safeguard a 38-ton supercomputer that keeps BMW race cars fully optimized.

Eaton will frequently update the portal with its latest power quality success stories. To search within the portal and download success stories, visit www.eaton.com/pqsuccess. To learn about Eaton’s line of power quality products and services, visit www.eaton.com/powerquality.
