

Eaton to Exhibit at the VMworld 2009 Tradeshow in San Francisco

Aug. 31, 2009 ... Eaton Corporation today announced it will exhibit at the VMworld 2009 tradeshow Aug. 31 - Sept. 3 in San Francisco. VMworld is a four day event that delivers education and insight into virtualization trends that Information Technology (IT) professionals depend upon to increase the efficiency and cost-effectiveness of IT operations.

This follows Eaton's recent announcement as the first power management company to offer software compatible with VMware's latest virtualization software, ESXi version 4.0. With this compatibility, Eaton's NetWatch 5.0 and Network Shutdown Module 3.20 allows virtual machines and host servers connected to an Eaton uninterruptible power system (UPS) to be safely shut down when necessary, protecting the data integrity on the computer or server being shut down.

"VMworld is a great opportunity to educate IT professionals about the changing face of virtualization," said Jim Tessier, product manager, Eaton Power Quality Division. "Eaton has been on the forefront of maximizing compatibility of our protection software for the virtual environment. The shutdown features of our software products raise the bar in user friendliness and intelligent management of VMware's ESXi virtual machines."

VMworld attendees are a mix of IT technical professionals and IT business decision makers. Expected attendance for the event is approximately 13,000. Attendees can visit Eaton at booth number 1333.
