Eaton Introduces New vPower Solution Bundle

September 23, 2009 ... To help customers fully utilize the benefits of the virtual environment, Eaton is offering the vPower Solution bundle that saves customers up to \$300 in power protection. With a combination of an Eaton uninterruptible power system (UPS), connectivity card and management and shutdown software, users can save valuable energy and costs while also protecting data on their virtual machines in the event of an extended power outage. This new product bundle includes:

- Eaton BladeUPS[®], 5130 or 9130 UPS that eliminates utility power problems and supplies clean, continuous power to connected equipment
- ConnectUPS Mini-Slot or X-Slot card that enables the UPS and software to interact with networked devices and receive status information
- Comprehensive Intelligent Power[®] Manager supervisory software (free for up to 10 nodes) that provides a global view of software and power devices connected to the network
- NetWatch software, which is free and fully compatible with VMware's ESXi (4.0) and vSphere (4.0) virtualization software, gracefully shuts down virtual machines and host servers

As a VMware Technology Alliance Partner, Eaton has been at the forefront of maximizing compatibility of its protection software for the virtual environment. The features of the company's software products raise the bar in user friendliness and intelligent management of virtual machines. Eaton's software, together with its energy-efficient extended runtime UPSs, helps to advance customers' green information technology (IT) initiatives and give IT and data center managers confidence that their virtual infrastructure is well protected.

The vPower Solution bundle offer is good through Dec. 31, 2009.
