Eaton Announces New Power Xpert Meters With Advanced Functionality To Monitor Quality And Power Consumption

Morges, Switzerland ... Diversified industrial manufacturer Eaton Corporation today announced the availability of its new Power Xpert[®] Meter in Europe, the Middle East and Africa (EMEA). The Power Xpert Meter product line is designed for manufacturing sites and data centres that require large amounts of business-critical power. The product line features the most efficient user interface, the highest accuracy of measurements and the best suitability for Information Technology (IT) applications available on the market.

The Power Xpert Meter product line, available in May, consists of Power Xpert Meters 4 000, 6 000 and 8 000. Because of the built-in software application, the meters can be directly plugged in to the network, and data can be tracked through a Web browser. The captured data gives the customer the opportunity to monitor and manage the power quality and consumption.

“The high cost of energy and limited available capacity of power give new importance to meters and power quality monitoring,” said Tatu Valjakka, product manager, Powerware Products and Services. “The load of electrical networks is reaching its limit, and companies have to follow and monitor where their power is consumed and what kind of quality it is. The meters are an important part of controlling the whole power supply chain.”

The Power Xpert Meters analyse electricity meaning that it learns from the power and is able to create a short summary of the quality. The meter stores all of the data to create a summary that can be used by an electrician or analyst if they encounter a problem.

The meters also feature a Web-based user interface and built-in open protocols for easy integration into other systems. This is a distinct competitive advantage for Eaton's Power Xpert Meters when compared to other, similar meters available on the market. The Power Xpert Meter product line gained acknowledgment from Frost & Sullivan, winning the 2007 Emerging Technology of the Year Award for outstanding features and performance.

For additional information on the Eaton Power Xpert Meters, visit our Web site at www.eaton.com/powerware.

Eaton's electrical business is a global leader in electrical control, power distribution, uninterruptible power supply and industrial automation products and services. Eaton's global electrical brands, including Cutler-Hammer®, MGE Office Protection Systems™, Powerware®, Holec®, MEM®, Santak and Moeller, provide customer-driven PowerChain Management® solutions to serve the power system needs of the industrial, institutional, government, utility, commercial, residential, IT, mission critical and OEM markets worldwide.

Eaton Corporation is a diversified industrial manufacturer with 2007 sales of \$13.0 billion. Eaton is a global leader in electrical systems and components for power quality, distribution and control; hydraulics components, systems and services for industrial and mobile equipment; hydraulics, fuel and pneumatic systems for commercial and military aircraft; intelligent truck drivetrain systems for safety and fuel economy; and automotive engine air management systems, powertrain solutions and specialty controls for performance, fuel economy and safety. Eaton has 79,000 employees and sells products to customers in more than 150 countries. For more information, visit www.eaton.com.
